

SW ESS012P ESD screwdriver

0,22-1,18Nm / 700-1000 1/min. / Push-Start

swepro ESS012P – The brushless swepro electric screwdriver impresses with a low-noise and low-vibration, powerful, and virtually maintenance-free electric motor. The corresponding 32V power supply unit enables a 2-stage speed adjustment, allowing precise screwing. The compact tool can be comfortably operated with one hand, as the direction switch is positioned directly on the ergonomically shaped handle. The screwdriver starts with the pressure release and switches off automatically when the set torque is reached. Thanks to ESD protection, screw connections to electronic components are possible without the risk of electrostatic discharge. Scope of delivery: 2 bits, torque protection cap, spiral spring for suspension. The three telescopic torque arm models TA-T030 (783640), ST-TAIS030SB (783642), and ST-TAIS050SB (783641) are compatible with the electric screwdriver.

Technical data

Item number	680020
Weight	0,540 kg
Dimensions LxWxH	240 mm
Free speed	700/1000 1/min
Torque Range	0,22-1,18 Nm
Operating voltage	DC32V
Direction of rotation	Right-Left
Trigger	Push
Standard deviation	+-3%
