

swepro ESS012P - The brushless swepro electric screwdriver impresses with a low-noise and low-vibration, powerful, and virtually maintenance-free electric motor. The corresponding 32V power supply unit enables a 2-stage speed adjustment, allowing precise screwing. The compact tool can be comfortably operated with one hand, as the direction switch is positioned directly on the ergonomically shaped handle. The screwdriver starts with the pressure release and switches off automatically when the set torque is reached. Thanks to ESD protection, screw connections to electronic components are possible without the risk of electrostatic discharge. Scope of delivery: 2 bits, torque protection cap, spiral spring for suspension. The three telescopic torque arm models TA-T030 (783640), ST-TAIS030SB (783642), and ST-TAIS050SB (783641) are compatible with the electric screwdriver.

Spécifications techniques

Numéro de produit	680020
Poids	0,540 kg
Dimension LxIxH	240 mm
Vitesse de rotation	700/1000 1/min
Emplitude de torque□	0,22-1,18 Nm
Voltage□	DC32V
Sens de rotation□	Droite - Gauche□
gâchette□	Pousser□
Déviacion□	+ -3%
