

## **swepro Group expands product range in Hungary**

**16 August 2016 – The international specialist for pneumatic technology expanded the product range at the Hungarian site halfway through the year. Since then, it has been selling electrostatics solutions and the IONic series alongside pneumatic products and industrial tools. Hungary is the first of the swepro Group subsidiaries to offer this range.**

The swepro Group opened its new subsidiary in Hungary's Szekesfehervar in 2014. The product portfolio at the branch near Budapest has now been expanded to include products from the IONic series, making it the first to sell electrostatics products from the swepro Group outside Germany. The new products range from single-row, double-row and air-assisted antistatic bars to special antistatic guns and ionising air blowers.

By expanding the product portfolio, the Hungarian subsidiary aims to meet customer demand for technology solutions and thereby strengthen existing customer relationships. The swepro Group sees huge potential for the use of IONic technology thanks to the many possible applications, especially in the manufacturing of films and plastics, as well as in the injection moulding, automotive and packaging industries.

### **Electrostatic solutions for increased safety and efficiency**

In industry, there are often problems with electrical charges. This can lead, for example, to production delays, impurities and damage to production goods as well as static discharge, which can be painful. The stationary and manual electrostatics products from swepro prevent these problems, helping to boost production efficiency and ensure occupational safety and quality assurance.

### **swepro Group driving international growth**

By expanding its product range, the swepro Group once again highlights its growth on a global scale and its position in the European market. Alongside Germany and Hungary, the pneumatic technology specialist is also selling its products at eleven other sites. The international growth of the Group is particularly bolstered by the close network of information sharing between the individual locations.

**About the swepro Group:**

As a specialist supplier of pneumatic technology, the swepro Group has been optimising a whole variety of applications from industrial customers for more than 30 years. Thanks to the wide range of pneumatic technology, pneumatic tools and powerful electrostatics products, swepro can create optimal solutions to meet individual customer requirements throughout Europe. In addition to excellent product quality and safety, the swepro Group also offers industry-specific advice and extensive services.
