

PRESS RELEASE

## New impact wrench for challenging tasks

26.08.2015 - The swepro Group presents the new SW 5830 impact wrench for challenging tasks. The ergonomically designed assembly tool is a powerful tool for use in a wide range of industries. Its light weight, highly efficient design and the downward position of its exhaust duct make it outstandingly useful.

To assist its customers in the constant improvement of their operating processes the swepro Group continues to optimise its product portfolio with new efficient precision tools. The specialist supplier of compressed air technology now presents the SW 5830, a high-performance impact wrench, with light-weight composite housing for challenging assembly and maintenance jobs. The ergonomically designed 1" impact wrench can be used in metal forming technology, in steel works or in the plant construction industry and is ideal in commercial vehicle and construction vehicle workshops for assembly work in the engine compartment or for changing wheels.

### Cost-efficient, reliable technology

The SW 5830 has been developed for the most arduous operating conditions and guarantees trouble free operation. Its light-weight composite housing and compact design give it a particularly low self-weight. The handle can be adjusted to either side and is therefore suitable for right or left-handed operators. Thanks to the very high-performance rotating piston motor the tool has a maximum torque of 3,428 Nm. This makes it possible to work effortlessly and economically in many sectors of industry. The special exhaust duct is a further advantage. Most impact wrenches have the exhaust duct directed towards the top or the side, which is annoying for the operator. To make the use of the tool annoyance-free for the operator the SW 5830 directs the exhaust air downwards.

### Different versions for individual uses.

The SW 5830 comes in two design versions: the pistol design (5830P), which is shorter and therefore more compact and the straight version (5830, 5830-S). The extra 6" of length of the shaft of the SW 5830-6 makes it ideal for use in working areas, which are difficult to access. Carsten Becker, the Sales Director at swepro knows the advantages of the various designs and says, "The high flexibility and ease of use of our serviceable, resilient and durable compressed air impact wrenches make them useful aids for workers in industry. Our range of models allows us to offer customers the right tool for every need."

### About the swepro Group:

For over 30 years swepro has been well-known as a specialist supplier of compressed air technology in Europe. As the sole partner of SILVENT AB, Sweden, the company from Neuss stands out from the crowd because of its modern, safe, efficient products and its thorough customer support. In addition, besides its comprehensive standard range,

swepro also offers its customers individual product solutions. All swepro products prove their worth through long lifetimes, low servicing costs and the highest standards of safety at work.
